EDUCATION TO INNOVATION

EXPERIMENT NO: 1

Aim: Create and save simple HTML document & modifying the

1. background of HTML
2. Webpage with different colors.

Description:

In this practical, we created a basic HTML document and applied CSS to change the background color of the webpage. Additionally, we used CSS properties to modify the color of different webpage elements like headers and paragraphs. This demonstrates the basic concept of styling HTML elements using CSS.

Procedure:

- 1) open a text editor like Notepad any software.
- 2) save the file with a .html extension (ex = Index.html.)

```
<!DOCTYPE HTML>
<HTML>
<head> <title> simple HTML document </title>
<style>
  body {
    background-color: light blue;
  }
</style>
</head>
<body>
  <h1> Web page </h1>
  <div style="background-color: yellow;">
  <h2> Different colors </h2>
  <p> Yellow Background </p>
  </div>
</body>
</html>
```

web page
Different colors
yellow background

**SILVER OAK
UNIVERSITY**
EDUCATION TO INNOVATION

Conclusion:

by using CSS in the <style> section, you can easily customize. The background color of the entire webpage and individual section's. This method makes it straight forward to style and organize the visual presentation of your HTML document.

Post Practical Question:

1. How can you apply different background images instead of a color to your webpage?

Ans: As allow you add multiple background image for an element through the background-image property.

2. How would you change the colors dynamically using JavaScript?

Ans: modify the color attribute specifically, target the color attribute within the element's style property to dynamically adjust the text color using JavaScript.

UNIVERSITY**
EDUCATION TO INNOVATION

EXPERIMENT NO: 2

Aim: Demonstrate use of

1. subscript,
2. super script,
3. align tag and
4. Format the text by using formatting tags like bold and italic.

Description:

In this practical, we demonstrated how to use:

1. Subscript (<sub>) and superscript (<sup>) tags to format text in mathematical and chemical notations.
2. Align attribute to control text alignment (center, right).
3. Formatting tags like bold () and italic (<i>) to emphasize specific parts of the text.

Procedure:

```
<!doctype html>
<html>
<head> <title> Demonstrate 'use' </title>
</head>
<body>
  H<sub>2</sub>O
  E = MC<sup>2</sup>
  <align="center"> This text is centered </P>
  <P><b>subscript</b></P>
  <P><i>super script</i></P>
</body>
</html>
```

SILVER OAK UNIVERSITY

EDUCATION TO INNOVATION

Conclusion:

Using HTML effectively allows for a variety of text formatting options, including subscript and superscript for ~~chem~~ chemical and mathematical notation as text alignment.

Post Practical Question:

1. Which tag is used to display text as a subscript in HTML?

- a) <sup>
- b) <sub>
- c) <script>
- d) <small>

Answer: b) <sub>

2. Which of the following tags is used to display text as superscript in HTML?

- a) <sub>
- b) <i>
- c) <sup>
- d) <u>

SILVER OAK UNIVERSITY

EDUCATION TO INNOVATION

Answer: c) <sup>

3. What is the correct way to align text to the center in a paragraph using HTML?

- a) <p align="right">This is centered text</p>
- b) <p align="center">This is centered text</p>
- c) <p style="center">This is centered text</p>
- d) <p text-align="center">This is centered text</p>

Answer: b) <p align="center">This is centered text</p>

4. Which tag is used to make text bold in HTML?

- a)
- b) <i>
- c) <u>
- d)

Answer: a)

5. What is the purpose of the <i> tag in HTML?

- a) To underline the text
- b) To make the text bold
- c) To italicize the text
- d) To strike through the text

Answer: c) To make the text ~~bold~~ italicize

6. Which tag is used to underline text in HTML?

- a) <i>
- b)
- c) <u>
- d) <sub>

Answer: c) <u>

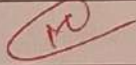

**SILVER OAK
UNIVERSITY**
EDUCATION TO INNOVATION

7. Which of the following attributes is used to align text within a <p> tag?

- a) text-align
- b) align
- c) style
- d) font-align

Answer: b) align

EXPERIMENT NO: 3

Aim: Draw the table as given format

Description:

In this exercise, a table is created using the <table>, <tr>, <th>, and <td> tags. The table structure was enhanced with attributes like borders, cell padding, and cell spacing. This demonstrates the creation of structured data presentation using tables in HTML.

Procedure:

```
<!doctype html>
<html>
<head>
  <title> table </title>
</head>
<body>
  <table border="1" cellpadding="5" cellspacing="0">
    <tr>
      <th> Name </th>
      <th> Age </th>
      <th> City </th>
    </tr>
    <tr>
      <td> Jayesh </td>
      <td> 24 </td>
      <td> Unjha </td>
    </tr>
    <tr>
      <td> Vinod </td>
      <td> 23 </td>
      <td> Anand </td>
    </tr>
  </table>
</body>
</html>
```

name	age	city
Jayesh	24	Unjha
Vinod	23	Anand

**SILVER OAK
UNIVERSITY**
EDUCATION TO INNOVATION

Conclusion: A summary Analyzing the data is provided below the table format works for you or if you need further customization!

Post Practical Question:

1. Which tag is used to create a table in HTML?

- a) <table>
- b) <tab>
- c) <tr>
- d) <td>

Answer: (a) <table>

2. What does the <tr> tag represent in an HTML table?

- a) A table cell
- b) A table row
- c) A table header
- d) A table caption

Answer:

b) A table cell

3. Which tag is used to define a header cell in a table?

- a) <td>
- b) <th>
- c) <header>
- d) <cell>

Answer:

b) <th>

**SILVER OAK
UNIVERSITY**
EDUCATION TO INNOVATION

4. What attribute is used to add a caption to a table?

- a) <caption>
- b) <tablecaption>
- c) title
- d) description

Answer:

a) <caption>

5. Which attribute would you use to specify the border of a table in HTML?

- a) border
- b) border-style
- c) frame
- d) cellpadding

Answer:

a) border

EXPERIMENT NO: 4

Aim: Create web page using metadata & <!DOCTYPE html> tag.

Description:

This practical demonstrates the use of the <!DOCTYPE html> declaration to specify the HTML version. It also covers the use of metadata tags like <meta> to define the character set, description, keywords, and other important information for the webpage. Metadata is essential for SEO and webpage responsiveness.

Procedure:

```
<!DOCTYPE html>
<html>
  <head>
    <meta name = "Description" Content = "An example
    of a web page using meta data"
    <meta name = "Key words" content = "HTML ; Metadata
    web development"
    <title> meta data example </title>
  </head>
  <body>
    <h1> Welcome to my web page </h1>
  </body>
</html>
```

Conclusion:

The <!doctype.html> ensure the page is rendered in standards mode according to html.5.

EXPERIMENT NO: 5

Aim: Create a Web page to display basic your resume

Description:

In this practical, a simple webpage was created to showcase a basic resume layout. HTML tags such as <h1>, <p>, , and <table> are used to structure sections like personal details, education, skills, and contact information. This is useful for creating personal portfolios or professional resumes online.

Procedure:

```
<!doctype html>
<html>
<head>
  <title> Resume </title>
</head>
<body>
  <h1> Narejha </h1>
  <p> Email : NK@gmail.com </p>
  <p> Phone: 9876543210 </p>
  <h2> Education </h2>
  <ul>
    <li> BSC (cs it) in silveroak university </li>
    <li> high School Diploma </li>
  </ul>
  <h2> Skills </h2>
  <ul>
    <li> HTML & CSS </li>
    <li> JS </li>
    <li> Python </li>
  </ul>
  <table>
    <tr>
      <th> Job title </th>
      <th> company </th>
      <th> year </th> </tr>
    <tr>
      <td> web Dev. </td>
      <td> crop </td>
      <td> 2023 </td>
    </tr>
  </table>
```

SILVER OAK UNIVERSITY

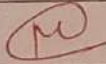

EDUCATION TO INNOVATION

```
<tr>
  <td> Intern. </td>
  <td> Sim. Inc </td>
  <td> 2020-2022 </td>
</tr>
</table>
</body>
</html>
```

Conclusion:

This webpage serves a simple effective way to present a resume online. it is mobile, responsive and user-friendly, using HTML and CSS that can easily be modified or expanded as needed.

EXPERIMENT NO: 6

Aim: Show the use of all tags and attributes of

1. ordered list
2. unordered list.

Description:

This exercise demonstrates the use of ordered () and unordered () lists in HTML. The tag is used for list items. Attributes like type, start, and reversed for ordered lists, and bullet styling for unordered lists, are explored to enhance list formatting.

Procedure:

```
<!doctype html>
<html>
  <head>
    <title> list </title>
  </head>
  <body>
    <h2> order list </h2>
    <ol type="1" start="1">
      <li> first item </li>
      <li> second item </li>
      <li> third item </li>
    </ol>
    <h2> unordered list </h2>
    <ul style="list-style-type: circle;">
      <li> item A </li>
      <li> item B </li>
      <li> item C </li>
    </ul>
    <h2> Another order list </h2>
    <ol type="I">
      <li> first i </li>
      <li> second i </li>
      <li> third i </li>
    </ol>
  </body>
</html>
```

**SILVER OAK
UNIVERSITY**
EDUCATION TO INNOVATION

Conclusion:

The orderlist is define of type in just like a number, and roman, and. The unordered list is define of type a square. Bullets etc.

Post Practical Question:

1. Which tag is used to create an unordered list in HTML?

- a)
- b)
- c)
- d) <list>

Answer: b)

2. What is the purpose of the tag in both ordered and unordered lists?

- a) To define the list itself
- b) To represent each item within a list
- c) To create a heading for the list
- d) To style the list items

Answer: a) To define the list itself

3. Which attribute can be used to specify the type of bullet in an unordered list?

**SILVER OAK
UNIVERSITY**
EDUCATION TO INNOVATION

- a) style
- b) type
- c) bullet
- d) list-style-type

Answer: b) type

4. What tag is used to create an ordered list in HTML?

- a)
- b)
- c)
- d) <list>

Answer: c)

5. Which attribute can you use to change the numbering style of an ordered list?

- a) style
- b) type
- c) numbering
- d) format

Answer: c) numbering.

EDUCATION TO INNOVATION

EXPERIMENT NO: 7

Aim: Create webpage which shows the use of hyperlink.

Description:

In this practical, hyperlinks were created using the <a> tag. The href attribute was used to link to external and internal web pages, while the target attribute was used to control how the linked page opens (e.g., in a new tab). This exercise is key in learning how to navigate between web pages.

Procedure:

```
<!doctype html>
<html>
<head> <title> Hyper link </title>
</head>
<body>
<h1> My webpage </h1>
<p> <a href = "https://www.examt.com" target = "_blank"
title = "visit site" <a> </p>
<p> <a href = "about.html" title About </a> </p>
<p> <a href = "#contact" > contact sect. </a> </p>
<h2 id = "Contact" > Contact us </h2>
<p> it better than concepts. </p>
</body>
</html>
```

Conclusion: The provided HTML code demonstrate how to create a webpage featuring various types of hyperlinks, including; external links, interlink and mailto links. These link enhance navigation and interactivity allowing user to easily access information.

Post Practical Question:

SILVER OAK UNIVERSITY

EDUCATION TO INNOVATION

1. What are the security implications of using hyperlinks that open in a new tab (i.e., using `target="_blank"`)?

Ans: `using target="_blank"` in an `anchor(a)` tag, allow link to open in browser. A malicious website opened through `target="_blank"` can change the window opener location to a phishing page potentially misleading user.

2. How would you create an anchor link that scrolls to a specific section of the same webpage?

Ans: Set an id for the element you want to link to, and then configure the link to use that id.

EXPERIMENT NO: 8

Aim: Show the use of all tags related to images.

Description:

This practical demonstrates the use of the `` tag to display images on a webpage. Attributes like `src` (source), `alt` (alternative text), `height`, and `width` are explored to control the display of images. It also covers image alignment and linking an image to another page using the `<a>` tag.

Procedure:

```
<!DOCTYPE html>
<html>
<head>
</head>
<body>
<h1> Image Display </h1>

<a href="https://www.example.com">

</a>
</body>
</html>
```

Conclusion:

1. What are the security implications of using hyperlinks that open in a new tab (i.e., using `target="_blank"`)?

Ans: Using `target="_blank"` in an anchor (`<a>`) tag, allow link to open in browser. A malicious website opened through `target="_blank"` can change the window, opener, location to a phishing page potentially misleading user.

2. How would you create an anchor link that scrolls to a specific section of the same webpage?

Ans: Set `id` for the element you want to link to, and then configure the link to use that `id`.

EXPERIMENT NO: 9

Aim: Create a webpage and use the following TAG to perform operation.

1. Create a simple table with at least three rows and three columns.
2. Use the <table>, <tr>, <th>, and <td> tags.
3. Add a caption to the table created above using the <caption> tag.
4. Add a border to your table using the border attribute in the <table> tag.
5. Align the content of your table cells using the align and valign attributes.
6. Change the background color of your table and its cells using the bgcolor attribute.
7. Use the cellpadding and cellspacing attributes to adjust the spacing inside and between the table cells.
8. Create a nested table by inserting one table inside another table's cell.

Description:

This practical focuses on creating a table with at least three rows and three columns using the <table>, <tr>, <th>, and <td> tags. Features such as captions, borders, alignment, background colors, cellpadding, and cellspacing were demonstrated. Additionally, a nested table was created by placing one table inside a table cell.

Procedure:

```
<!doctype html>
<html>
<head> <title> table </title>
</head>
<body>
<table border="2" cellpadding="10" cellspacing="5" bgcolor="green">
<caption> Employ Info </caption>
<tr bgcolor="red">
<th align="center" valign="middle">Id </th>
<th align="center" valign="middle">Name </th>
<th align="center" valign="middle">Department </th>
</tr>
<tr>
<td align="center" valign="middle">201 </td>
<td align="center" valign="middle">Alice </td>
<td align="center" valign="middle">Sales </td>
</tr>
<tr>
<td align="center" valign="middle">202 </td>
<td align="center" valign="middle">NK </td>
<td align="center" valign="middle">Sales </td>
</tr>
</table>
```

SILVER OAK UNIVERSITY

EDUCATION TO INNOVATION

```
<tr> <th align="center"> Role </th>
<td align="center"> Location </td> </tr>
</table>
<tr>
<td align="center"> 103 </td>
<td align="center"> char </td>
<td align="center"> HR </td>
</tr> </table>
</body>
</html>
```

Conclusion:

The code is a straightforward implementation of an HTML table that effectively showcases how to organize information in table format which can improve data presentation and make it easier for user to digested complex information.

Post Practical Question:

1. What are the benefits of using CSS to style tables instead of inline HTML attributes?

Ans: Instead of setting each attribute inline you can use CSS classes to apply a uniform style. This approach provides a clean HTML structure and allows flexible, reusable and maintainable styling across the entire website.

2. How would you handle large tables with many rows and columns to improve readability and usability?

Ans: Using a table fixed header with position: sticky to keep column title visible while scrolling and horizontal scrolling by wrapping the table in a div with overflow-x: auto. Additionally, add CSS.

EXPERIMENT NO: 10

Aim: Create a webpage and use the following TAG to perform operation.

1. Use the <frameset> tag to create a webpage with two frames.
2. Use the <frame> tag to define the content of each frame.
3. Specify different attributes like border, frameborder, framespacing, and marginwidth for the frames.
4. Set the width and height of the frames using the cols and rows attributes in the <frameset> tag.
5. Create a navigation menu in one frame and display the corresponding content in another frame using the target attribute in the <a> tag.

Description:

This practical shows the use of the <frameset> and <frame> tags to create a webpage with two frames. The webpage includes a navigation menu in one frame and displays related content in another frame using the target attribute. Attributes like border, frameborder, framespacing, and marginwidth are also demonstrated to control the appearance and spacing of frames.

Procedure:

```
<!doctype html>
<html>
<head>
<title> frame </title>
</head>
<body>
<frameset cols="30%,70%" frameborder="1" framespacing="
border="2">
<frame src="Menu.html" name="Menu" marginwidth="10"
marginheight="10">
<frame src="Content.html" name="Menu" marginwidth="10"
marginheight="10">
</body>
</html>

<!doctype html>
<html>
<head>
<title> Navigation menu </title>
</head>
<body>
<h3> Menu </h3>
<ul>
<li> <a href="Page.html" target="Content frame">
Page 1 </a> </li>
```

Conclusion:

The code is a straight forward implementation of code is a straight of the HTML table the effectively show ease how to organize information in tabular format which can improve data presentation and make it easier for the user to digest and consume information.

Post Practical Question:

1. What are the drawbacks of using frames in modern web development, and what alternatives exist?

Ans:

Separation of concerns; Reusability consistency, ease of maintenance, performance, media query, easier collaboration.

2. How can you handle issues related to frame security and browser compatibility?

Ans:

pagination, infinite scrolling, shopping and filtering, responsive, design, highlighter, intertext, data sticky, handling and columns, collapsible, groups or section use of cards of alt, creative layout.

<Footer>
 <p> & COPY ; 2024 - Jewellery Shop
 </Footer>
 <body>
 </body>

Conclusion:

Conclusion:
The basic template serves as a starting point for an online jewelry shopping website and you can expand it further with additional features and functionalities as needed.

Post Practical Question:

- Practical Question:**
1. How would you enhance the user experience by integrating JavaScript or CSS animations in your jewelry shopping website?

Ans:

Ans: To enhance user experience on the Jewelry Shopping website, implement JavaScript per dynamic feature like adding product to a shopping cart with real time update on alerting option. Incorporate CSS animations for button hover effect and smooth transition when displaying product details or images.

2. How can you make your shopping website responsive for mobile and tablet devices?

Ans: To make the shopping website for mobile and table devices utilize CSS media queries to adjust elements font size and image dimensions based on screen width implement a flexible grid system or CSS flex box to ensure product card stack appropriately on smaller screens while maintaining a visually appealing arrangement. Additionally use relative units for padding and margin to ensure consistency.

EXPERIMENT NO: 13

Aim: Create a Web page to display your resume.

```
<!doctype html>
<html>
  <head><title> resume </title>
</head>
<body>
  <h1>
  <p>
  <p>
  <section id="summary">
    <h2>
    <p>

</section>
<section id="Experience">
  <h2> Ex Per ience </h2>
  <div class="Job">
    <h3> Job Title - Company </h3>
    <p> month yyy - present </p>
    <ul>
      <li> web DEV </li>
      <li> UI/UX </li>
    </ul>
    <section id="skills">
      <h2> skills </h2>
      <ul>
        <li> HTML </li>
        <li> JS </li>
        <li> Java </li>
      </ul>
    </div>
  </div>
</body>
</html>
```

EDUCATION TO INNOVATION

Description:

This practical involves creating a more detailed and formatted resume using HTML. Sections like personal details, education, work experience, and skills are presented using appropriate tags like `<h1>`, `<p>`, ``, and `<table>`. This showcases how HTML can be used to create professional online resumes.

Procedure:

Conclusion:

The provided HTML and CSS creates a simple, structured web page to display a resume, featuring a section for personal information, experience, education, and branding.

Post Practical Question:

EDUCATION TO INNOVATION

1. What enhancements can you add to make the resume more interactive, such as using modal windows or downloadable sections?

Ans: To enhance the resume interactivity you could add modal windows to display detailed information about each job experience when clicked, providing a more in-depth overview without cluttering the main page. Implementing downloadable sections such as PDF of the resume.

2. How would you update your resume in the future while maintaining consistency and formatting across devices?

Ans: To update your resume in the future and formatting across devices, use responsive web design techniques to adapt the layout for different screen sizes, ensuring readability on desktops, tablets, and smartphones. Implement a CSS framework like Bootstrap to maintain a cohesive appearance and ease of update. Additionally, use a version control system like Git to track changes and collaborate efficiently, ensuring a consistent format over time.

EXPERIMENT NO: 14

Aim: Show the use of all tags and attributes of ordered list and unordered list.

Description:

In this practical, ordered and unordered lists were created using and tags. Different attributes of lists were explored, such as the type attribute for ordered lists (e.g., numbers, letters) and various bullet styles for unordered lists. This practical highlights how to create and style lists on a webpage.

Procedure: <!doctype html>

```
<html>
<head> <title> ois 01 </title>
</head>
<body>
  <ol type="a">
    <li> item 1 </li>
    <li> item 2 </li>
  </ol>
  <ol type="1" start="3">
    <li> item 1 </li>
    <li> item 2 </li>
    <li> item 3 </li>
  </ol>
</body>
</html>
```

Conclusion:

Conclusion:

HTML using list effectively organizes content and enhances readability. Unordered and ordered lists handle bullet and numbered lists, while description lists are ideal for term-based content. By combining these list types, we can create structured, clean web pages that improve user experience.
